

It's time to *Rethink Varicose Veins* *They're more than just a cosmetic problem!*

If left untreated, varicose veins can progress to a more serious form of vein (venous) disease called chronic venous insufficiency (CVI), with signs and symptoms that worsen over time.

That's why the Society for Vascular Surgery®, American Venous Forum and American College of Phlebology have teamed up to encourage those with varicose veins to talk to a vein specialist.

You don't have to suffer in silence.

There are effective and minimally-invasive treatments available that are covered by many insurance plans.

So talk to a vein specialist today! They can help you get screened for varicose veins and CVI and discuss a treatment option that may be right for you.

Facts about varicose veins and CVI

- More than 30 million Americans suffer from venous disease, including varicose veins and CVI^{i,ii}
- Only 1.9 million of those seek treatment annuallyⁱⁱⁱ, while the vast majority remain undiagnosed and untreated*
- More people lose work time over vein disorders than from artery disease^{iv}
- Varicose veins are the most recognizable form of venous disease; when the condition progresses to CVI, signs and symptoms can include pain, swelling, restlessness and fatigue of the legs, skin damage and ulcers
